

Customer Profile

Solid Edge gives Pegasus the edge in the steel structural fabrication market

Established in 1997 and based in Witney, Oxfordshire, Pegasus Engineering & Fabrication Ltd combines expertise and versatility to produce a wide range of products and services in the welding and fabrication of various ferrous and non-ferrous metals, including stainless steel and aluminium.

The company has established a strong client base with an enviable reputation as a fabrication and installation specialist. Pegasus specialise in one-off manufacturing or prototype production to suit their clients needs and the quality of their workmanship provides reliable delivery schedules and after sales service.

Pegasus embrace the most up-to-date CAD systems alongside more traditional design methods which have been used for centuries. The company takes their customer designs from concept, to prototype, through to production at a realistic cost.

Solid Edge is Pegasus' preferred CAD system as it enables them to adapt all major projects if and when it is necessary. Solid Edge Version 18 has given the company an edge in the market as they can provide technical drawings and animations of a job on demand. For instance, customers can see a stairwell come to life before Pegasus' fabricators have even lifted a finger. This saves customers time and money as the designs can then be adjusted before the work gets underway.

“The amazing functionality of Solid Edge coupled with the outstanding training and support solutions offered by Cutting Edge Solutions Ltd have added value throughout each stage of our products lifecycles. From the initial design concept right through to production our processes are streamlined and much more cost and time effective. This in turn means that our customer requirements, schedules, and budgets are always met and is why we enjoy the enviable reputation that we have within the industry today.” Douglas Fisher, Managing Director
