

Customer Profile

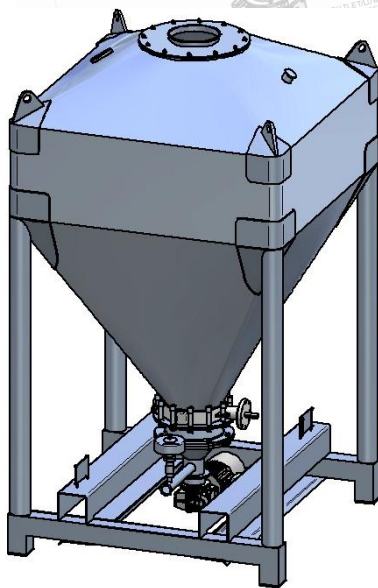

Protek Engineering Solutions Ltd Rely on Solid Edge for all Sheet Metal & Solid Part 3D Modelling

Protek Engineering Solutions Ltd was established in 2003 by the late Chris McClellan. Although a relatively young company, our growth is a direct result of our primary business principals; delivering excellence in engineering and high standards of client service and support.

Protek specialises in stainless steel fabrication and machining. It operates across a number of industries, including pharmaceutical, food processing, architectural and chemical.

A large proportion of the work undertaken by Protek is bespoke. The project department creates bespoke solutions to fulfil a client's specific requirement through the use of 2D and 3D modelling software. Solid Edge was chosen for its user friendly interface and the availability of a sheet metal component within the standard package. The regular updates also provide significant improvements over the previous versions, offering good value for money.

Cutting Edge Solutions Ltd has been a friendly, reliable and competitive supplier of Solid Edge and has supported Protek from the outset.

“Solid Edge allows us to create complex bespoke solutions that the customer can approve at the design stage, and ensures us the most efficient manufacturing process available”.

Adam Norton – Project Engineer
