

Customer Profile

The leading specialist in wet room and easy access bathing solutions improves product design using Solid Edge.

Impey UK was originally established to provide shower and bathing solutions for the less able. Since it began in 1997, the Somerset-based company has grown to become a leader in both the healthcare and domestic wet room shower markets. The company designs and manufactures a wide range of bathing products including wet room floor formers, shower trays, shower doors, shower seats, grab rails, drainage solutions and more.

In recent years it has become apparent that 2D design has its limitations when it comes to visualising new concepts. By moving to 3D modelling software Impey UK has been able to dramatically reduce the turnaround time for prototyping, design and manufacturing.

In addition, they are able to use the software to produce rendered installation instructions, which lends itself to much clearer and more professional looking instructions.

Impey began using Solid Edge on recommendation from one of their major suppliers. Solid Edge has benefited the company enormously, as transferring files and making updates to product designs is now a straightforward and less time-consuming process.

Below is a through-section of an Impey Mendip shower tray and trap configuration generated in Solid Edge, along with a photograph of the actual product.
