

Customer Profile

Goshawk Design Solutions use Solid Edge in the Aerospace Industry

Goshawk Design Solutions (GDS) supply consultancy design and analysis solutions to the Mechanical Engineering and Aerospace industries. The company works to exacting customer standards and tight development timescales. To meet our customers' exacting demands a versatile CAD system is crucial and GDS has chosen Solid Edge for this requirement.

GDS needed a CAD system that could cope with complex geometry to produce CAD models and drawings for a composite engine intake. CAD surfaces were exported to the manufacturer to make the composite tool and a set of manufacturing drawings supplied for the assembly.

Compared to other 3D CAD systems we could have selected, Solid Edge is the easiest to use and is highly rated by our design staff.

"Cutting Edge always provides a first class service and their training courses are excellent", said Ian McBride, Director of Goshawk Design Solutions.

Solid Edge has improved GDS's productivity with faster modelling techniques. Large assemblies are easy to handle and drawings are completed in less time due to the simplicity of the Solid Edge drafting tools.

Solid Edge has greatly improved the software functionality putting the CAD designer first.
