

THINK AUTOMOTIVE Ltd

Think Automotive was founded in 1967 to produce packaged oil cooler installations primarily for the automotive industry and has continued to expand into most aspects of high performance automobile plumbing.

At the time of reviewing software packages Solid Edge satisfied all of the criteria set out. Since the purchase of Solid Edge the enhancements to the software have further vindicated this decision.

The initial requirement was to produce fully detailed part drawings as a foundation for quality control, once this need had been satisfied the next stages were the facilitation of product improvement and the introduction of new designs.

From demonstrating the software through to customer support Cutting Edge solutions have demonstrated why they are rated in Europe as the number one for customer satisfaction.
