

Cutting Edge Solutions Ltd, Excellent Feedback from Version 20 & Velocity Customer Day

Oxfordshire, UK, 20th June 2007 – Cutting Edge Solutions Ltd (CES), the UK's leading UGS PLM Software solutions provider, today announced the success of its recent Customer Day.

As an integral part of its continual customer service initiatives, CES holds free-of-charge customer days which coincide with the launch of each new version of Solid Edge.

The latest event took place at the CES offices at Leaffield Technical Centre, Oxfordshire, on Thursday 14th June 2007. Attendees were given an opportunity to learn about the exciting new functionality of Solid Edge Version 20 in a friendly, informal environment.

This event built on the success of the last customer day and by popular demand the agenda once again included 'Did you know?' sessions. Customers chose their own agenda by selecting sessions from several categories, which they were most interested in. This offered customers the chance to learn several useful tips and techniques, thus improving their personal productivity.

Feedback from the event was extremely positive with customers especially praising the value and relevance of the 'Did you know?' sessions in relation to their work processes. 60% of attendees viewed the overall event as being excellent.

"This was my first time at a CES customer event and it was a very nice idea. I would have liked to have taken part in all of the 'Did you know?' sessions!" said Nigel Jones, Johnson Matthey.

Louise Sipple, Marketing Executive at CES, commented: "We have always had a good response to these events, which serve to inform our customers and give them the opportunity to meet with CES staff and other users. I am delighted that the day was an outstanding and much appreciated success for us all. We aim to continue to build on the success of this format and we already look forward to the next one!"

About Cutting Edge Solutions Ltd

Since formation in October 1997, Cutting Edge Solutions has become the leading UGS solutions provider in the UK. Based in Leaffield, Oxfordshire, UK, the company provides excellent business solutions and support for companies utilising state-of-the-art computerised technology.
